# CODE VS CONDUCT

SPECIAL OFFER

\$25.00

IN THE YEAR 2080...

AI has become an integral part of human society..

...introduced by B.C.I. Labs

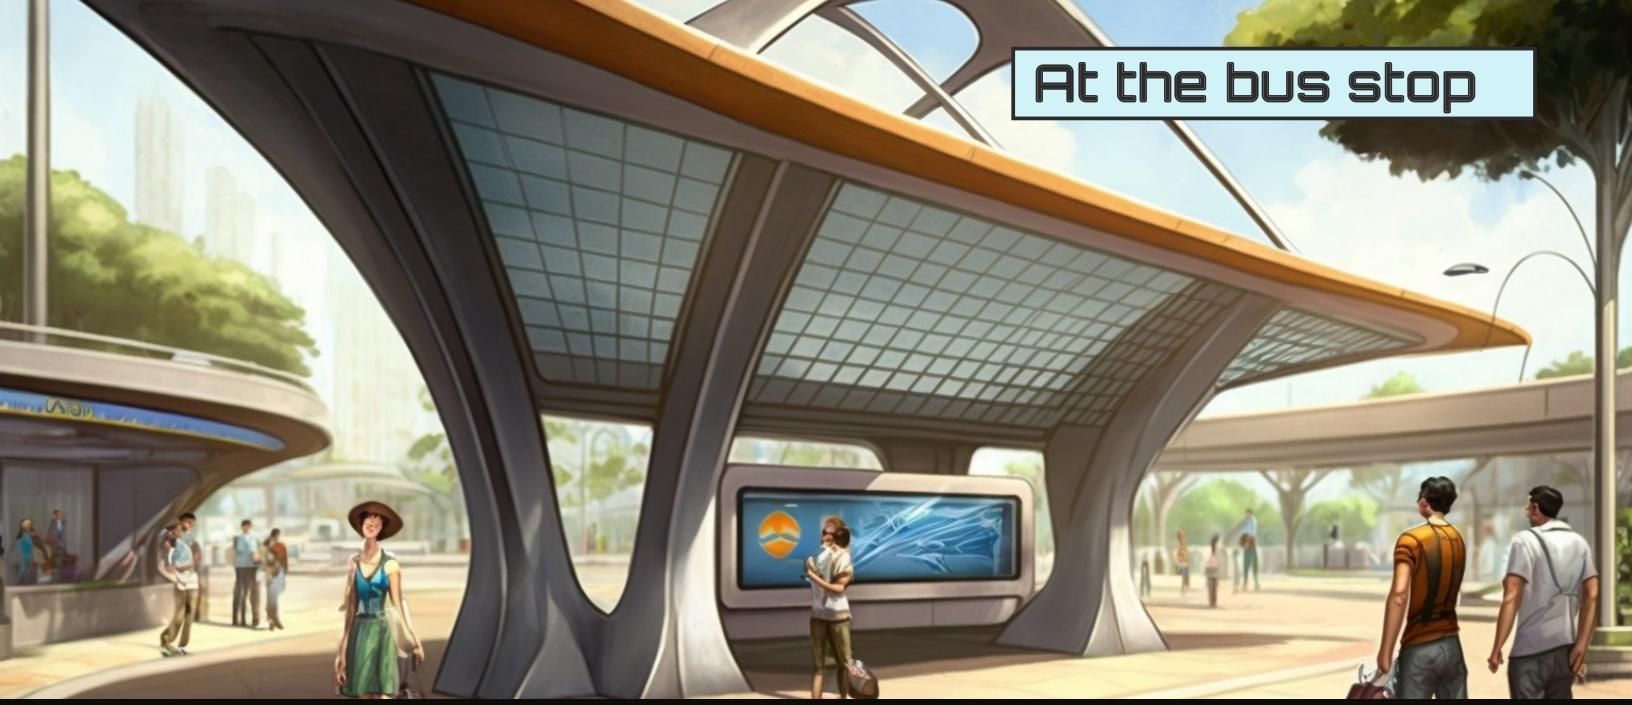

**Maya** is a 27 year old woman from a financially deprived background. She works at NexGen technologies. For the past few weeks she has been facing trouble accessing day to day AI powered facilities.

**Moh** is a 72 year old Disability Rights Attorney who has worked all his life trying to build an inclusive environment for differently abled individuals.

## At the bus stop

Maya, after understanding that she is being restricted from accessing certain AI facilities she approaches government officials...

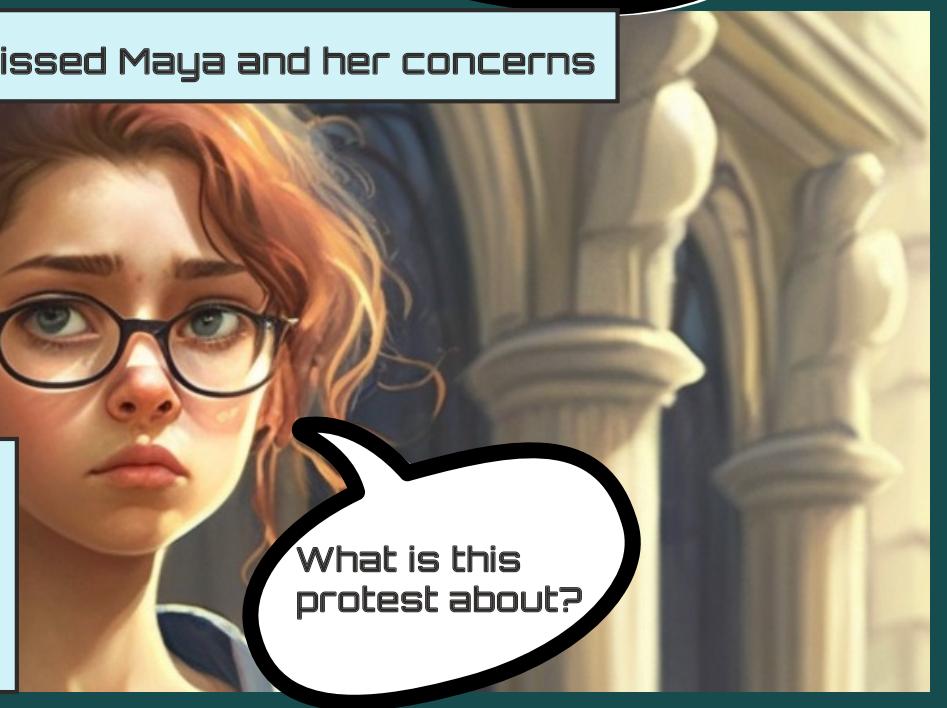

I don't think you understand, my day-to-day life has been affected by this...

Ma'am, you are mistaken, the AI algorithm is unbiased...

Why is it blocking my access and restricting medical facilities!?

Officials dismissed Maya and her concerns

Maya is distraught by the lack of support and walks away from the building towards a group of protestors

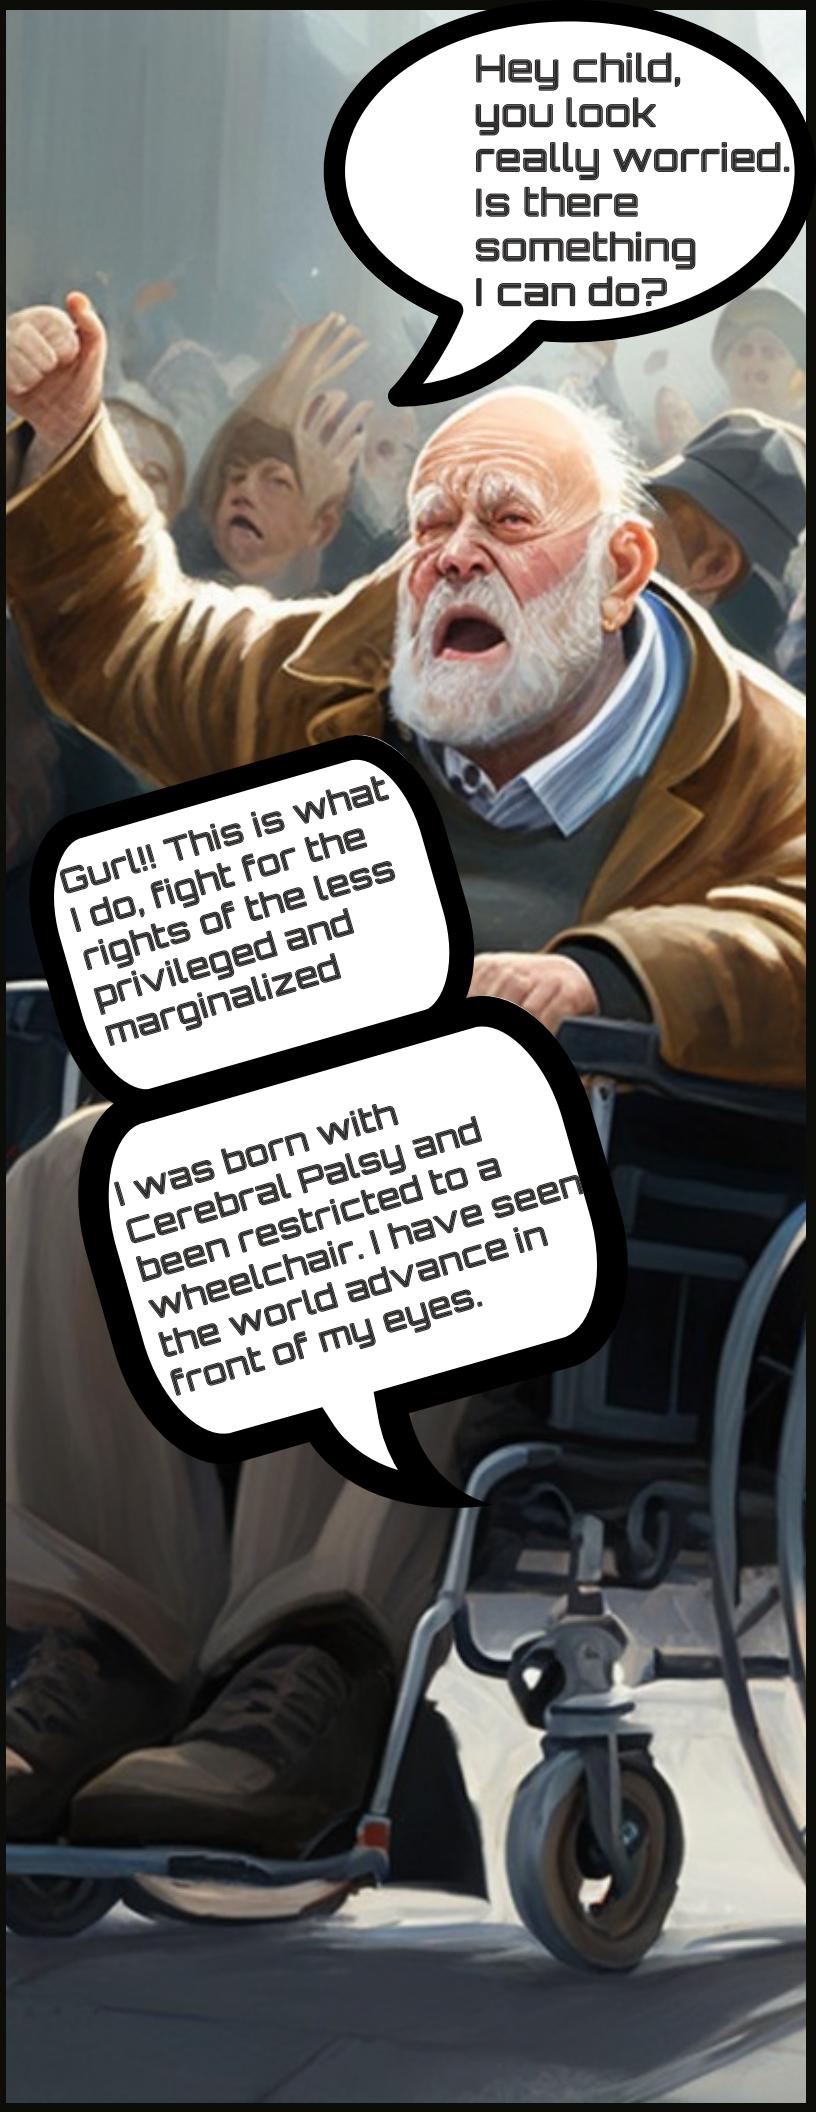

What is this protest about?

Hey child,  
you look  
really worried.  
Is there  
something  
I can do?

I am not sure you will  
understand, I feel  
side-lined by the  
system.

Do I have any place  
in this society? Does  
my hard work have  
no value? Is my worth  
decided by my wealth?

Gurl!! This is what  
I do, fight for the  
rights of the less  
privileged and  
marginalized

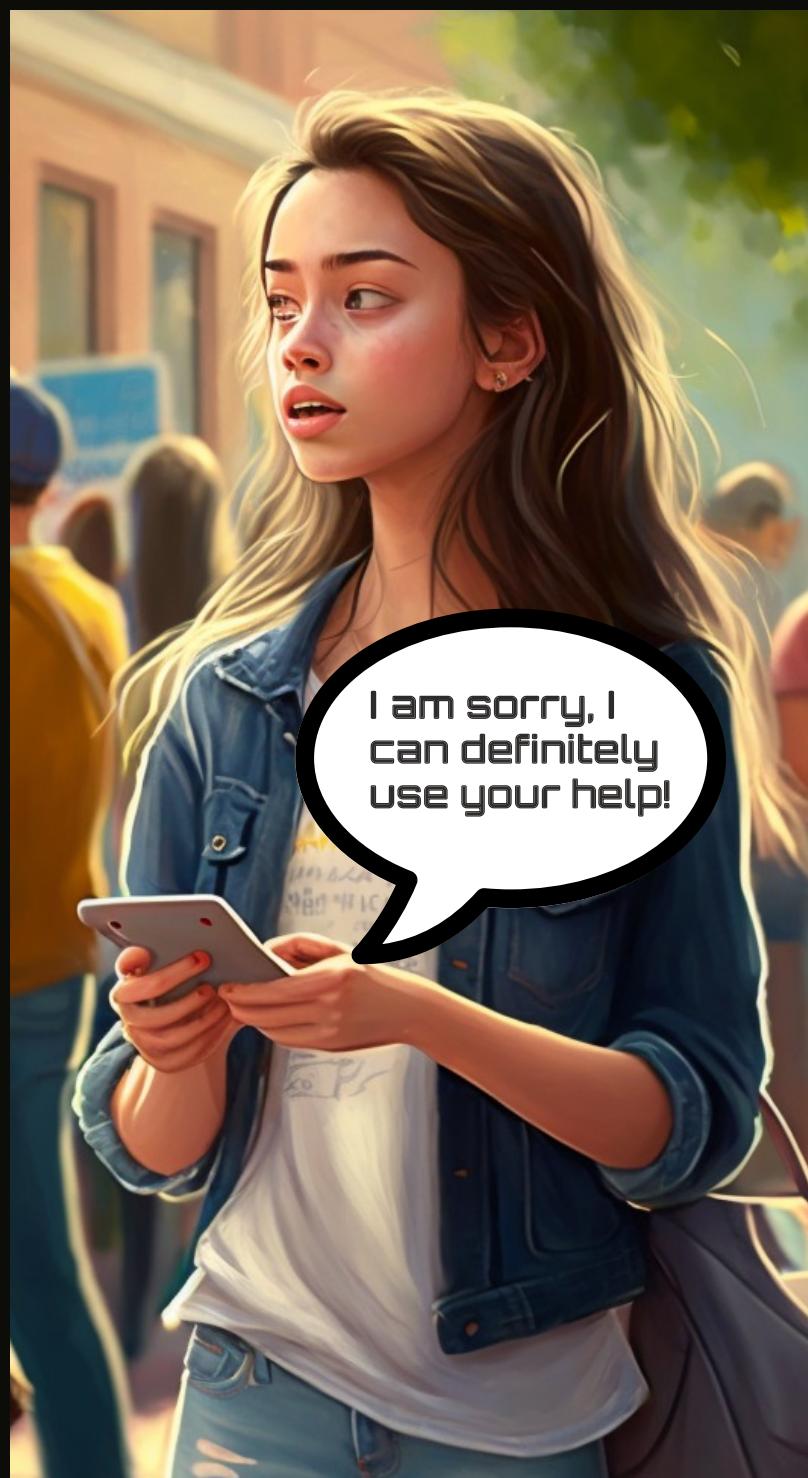

I was born with  
Cerebral Palsy and  
been restricted to a  
wheelchair. I have seen  
the world advance in  
front of my eyes.

Trust me I know what it feels to be neglected and left out.

So I have decided to work for people like me and try to make their life better. You had to go through so much...

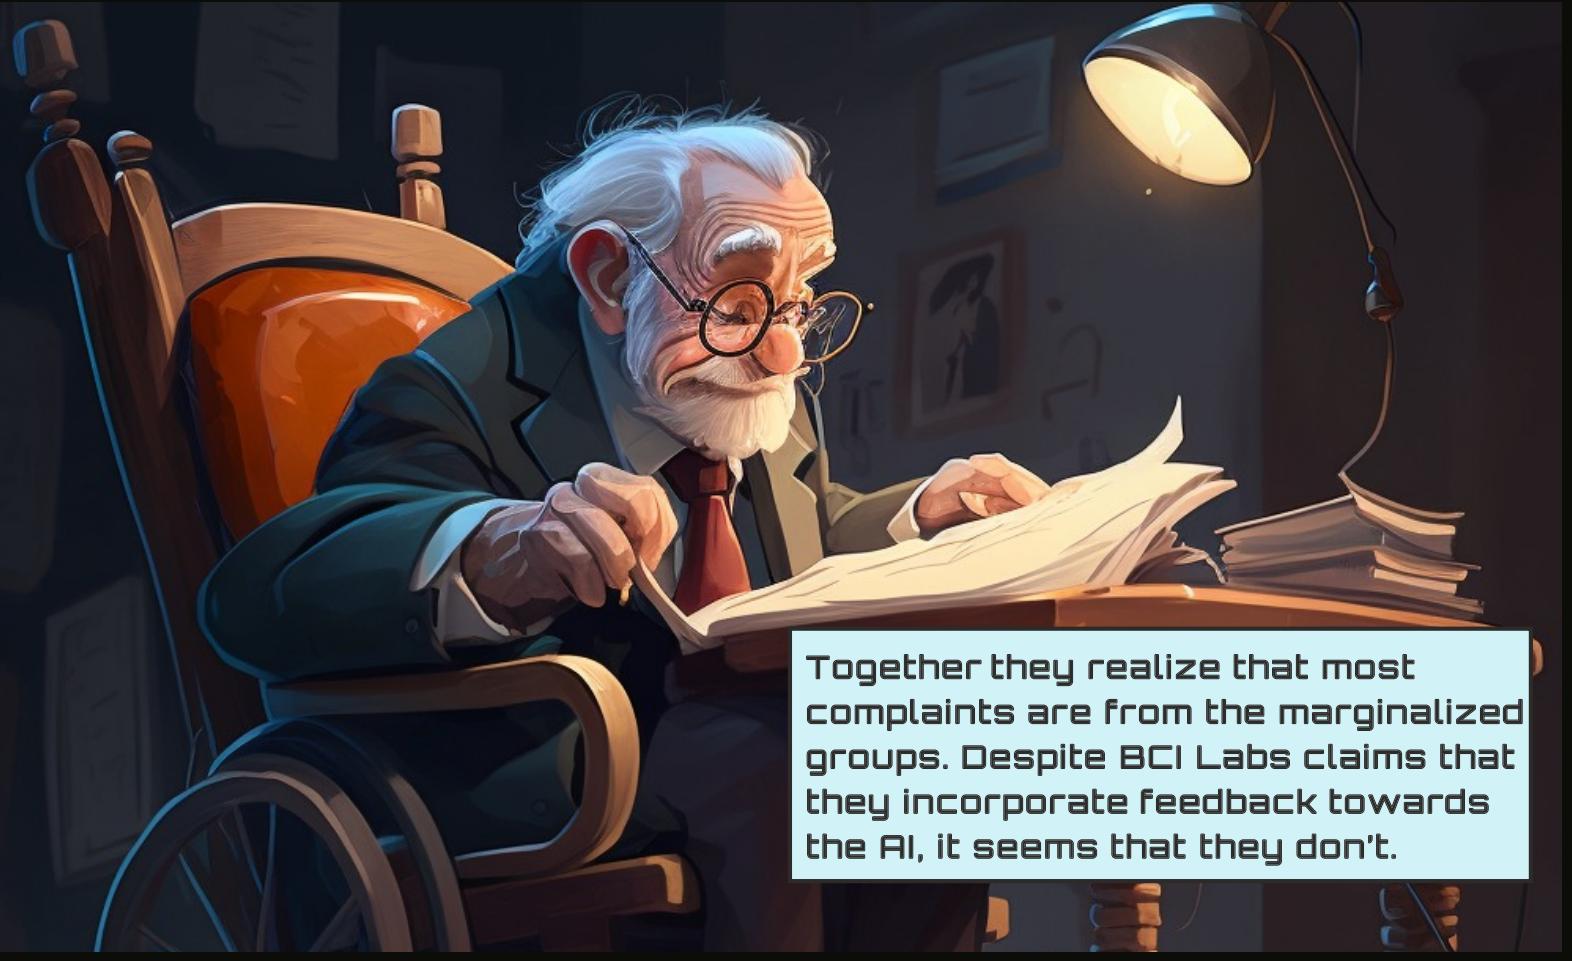

Come join me in my fight..

So they decide to join hands in this fight

Maya uses her tech knowledge and her ability to access community forums to extract data of previous complaints against BCI Labs.

Having gathered all the required evidences, Moh and Maya gather support and file a lawsuit against BCI Labs.

My Lord, BCI is the foundation of modern day society. This is nothing but a conspiracy from the criminally inclined group. They should be prosecuted.

On the day of the hearing...

The modern day society you are talking about, is made from the people, not your AI systems. The AI system has stopped incorporating feedback from humans and that has led to major bias in AI functioning.

If this is not corrected soon, we will be divided into 2 factions of society, one that AI deems suitable and the one it doesn't.

After much consideration, the jury and judge come to the conclusion, that the BCI has been negligent with the handling of their AI systems, relying too much on its intelligence and decision making. BCI Labs is prosecuted and fined heavily. Additionally, a committee is established to oversee their functioning for the next decade to ensure all policies are followed.

Due to Moh and Maya's successful efforts, the government decided to establish a national level governing body consisting of, Ethical AI consultants, Bias Mitigation Experts and Algorithm Justice Advocates to over see all AI organizations.

# THE END!!
